Assembl Brand Guidelines

Premium intelligence, built in Aotearoa.

Version 1.0 • *Prepared for website, product and marketing implementation*

Brand essence: Quiet intelligence. Time returned. **Design direction:** soft light, warm editorial typography, airy glass surfaces, feather kete symbolism, subtle fairy-light sparkle, and calm Aotearoa landscapes.

1. Core identity

Assembl is a premium AI platform built for Aotearoa. The visual system should feel calm, human, and quietly magical rather than cold or overtly futuristic.

The brand works best when it balances three cues at once: soft editorial elegance, light-touch digital sophistication, and the handcrafted symbolism of the kete.

Use generous whitespace, warm neutral colour, serif-led headlines, restrained sparkle accents, and feather kete imagery as the primary emotional anchors across marketing and product surfaces.

2. Logo system

Primary wordmark: the serif “assembl” wordmark in Taupe or Twilight Taupe on light backgrounds.

Secondary lockup: kete emblem to the left of the wordmark for hero banners, decks, and website mastheads.

App/profile icon: single magical kete on a Mist background, with minimal sparkle and no heavy outline.

Use	Asset	Preferred colour	Notes
Wordmark	assembl	Taupe #9D8C7D	Use on light neutral backgrounds
Lockup	Kete + wordmark	Taupe + Soft Gold accents	Use for headers and campaign artwork
App icon	Single kete	Mist background + Soft Gold sparkles	Keep icon centred with generous

			padding

3. Core palette

Mist #F7F3EE	Cloud #EEE7DE	Sand #D8C8B4	Taupe #9D8C7D	Twilight Taupe #6F6158	Sage Mist #C9D8D0	Soft Gold #D9BC7A

4. Typography

Display / headlines: *Cormorant Garamond* — Elegant, timeless and expressive. Use for hero headlines, section titles and premium campaign statements.

Body / interface: *Inter* — Clear, modern and highly readable. Use for body copy, navigation, buttons, tables and all dashboard UI.

Technical / metadata: *IBM Plex Mono* — Use sparingly for micro labels, timestamps, evidence pack metadata and system details.

5. Industry kete system

Each industry uses the same silhouette and feather language. Distinction comes from subtle accent tone, not from changing the core structure of the kete.

Code	Industry	Accent	Hex
PIKAU-01	Freight & Customs	Soft Moss	#B8C7B1

HOKO-02	Retail	Blush Stone	#D8C3C2
AKO-03	Early Childhood	Soft Sage	#C7D6C7
TORO-04	Family	Moonstone Blue	#C7D9E8
MANAAKI-05	Hospitality	Warm Linen	#E6D8C6
WAIHANGA-06	Construction	Clay Sand	#CBB8A4
ARATAKI-07	Automotive & Fleet	Dusky Rose	#D5C0C8
AUAHA-08	Creative	Pale Seafoam	#C8DDD8

Kete usage rules

- Use the correct kete and accent for each industry. Do not swap colours between sectors.
- Maintain the shared silhouette, feather scale and overall softness across every variation.
- Give each kete room to breathe. Avoid clutter, heavy strokes, or aggressive gradients.
- Sparkle and glow are accent treatments only; they should add delight, not dominate the composition.

6. Digital application

The product experience should feel calm, intelligent and beautifully crafted. Dashboard density should remain low; content should float on airy surfaces with subtle blur, soft shadow and warm type.

7. Website-ready design token sheet

Core colours

Token	Value
--assembl-mist	#F7F3EE
--assembl-cloud	#EEE7DE
--assembl-sand	#D8C8B4
--assembl-taupe	#9D8C7D
--assembl-taupe-deep	#6F6158
--assembl-sage-mist	#C9D8D0
--assembl-soft-gold	#D9BC7A

Industry colours

Token	Value
--kete-pikau	#B8C7B1
--kete-hoko	#D8C3C2
--kete-ako	#C7D6C7
--kete-toro	#C7D9E8
--kete-manaaki	#E6D8C6
--kete-waihanga	#CBB8A4
--kete-arataki	#D5C0C8
--kete-auaha	#C8DDD8

Text & UI

Token	Value
--text-primary	#6F6158
--text-secondary	#8E8177
--text-body	
--border-soft	rgba(142,129,119,0.14)
--shadow-soft	0 8px 30px rgba(111,97,88,0.08)
--radius-card	24px
--radius-chip	16px
--radius-pill	999px

8. Lovable implementation notes

• Use a light theme only. Avoid heavy black or deep charcoal sections unless used very sparingly for contrast.

• Headlines should use Cormorant Garamond or a similarly elegant editorial serif. Body, UI and navigation should use Inter.

• Cards should have generous internal padding, 24px radius, a 1px soft border, and restrained shadow. Prefer soft blur and tonal layering over obvious gradients.

• Use tiny sparkle particles only on hero sections, hover moments, or celebratory completion states. Do not scatter sparkle through dense productivity screens.

• Industry switching should update the workspace kete, accent chip and contextual highlights—but keep the core layout consistent.

• Keep CTA copy calm and human. Good examples: “See what a quiet day looks like”, “Request access”, “Open pack”, “View activity”.

Recommended font stack

Cormorant Garamond, serif
Inter, sans-serif
IBM Plex Mono, monospace
